Art Unit: 3662

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to a method of determining at least one parameter of a radiating source, classified in class 342, subclass 428.
 - II. Claims 13-33, drawn to a directional correlation system, classified in class 342, subclass 145.
2. Inventions group 1 and group 2 are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention group 2 has separate utility such as in carrying out the method the steps of predicting, for each potential value of the parameter, a relational phase, and measuring an actual relational phase.
3. Inventions group 1 and group 2 are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention group 1 has separate utility such as in apparatus without an encoder coupled to the steering mechanism, a set of comparator each being coupled to an output of the receiver, a set of comparators, and a set of counters.
4. Because these inventions are distinct for the reason given above, and the search required for group 1 is not required for group 2, restriction for examination purposes as indicated is proper.
